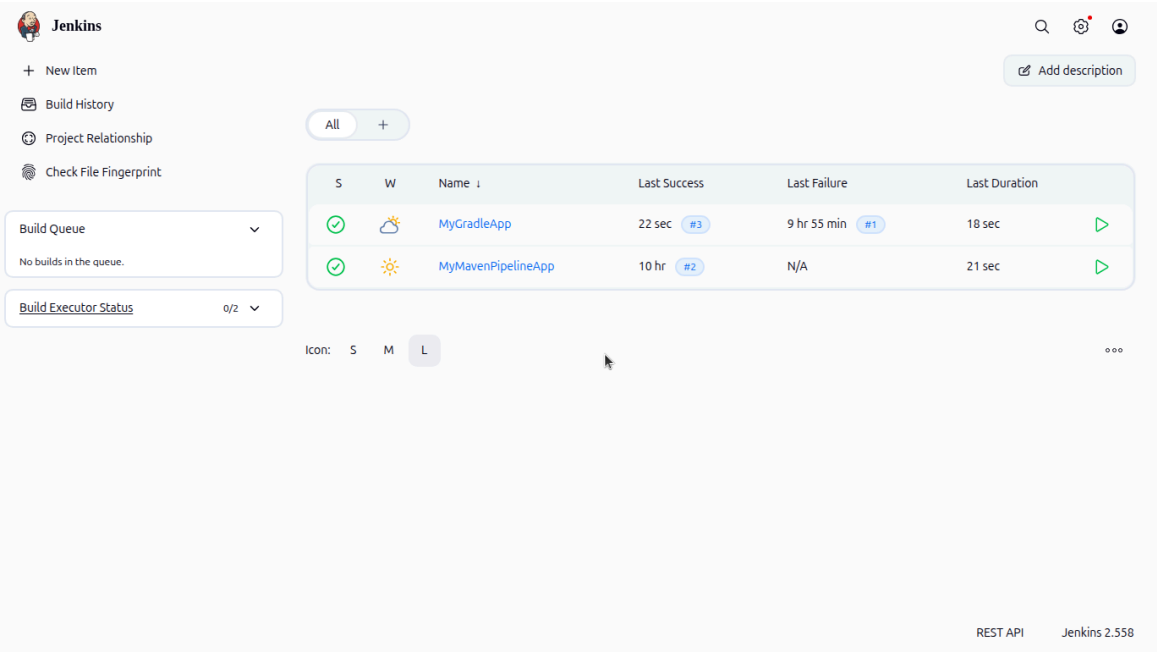
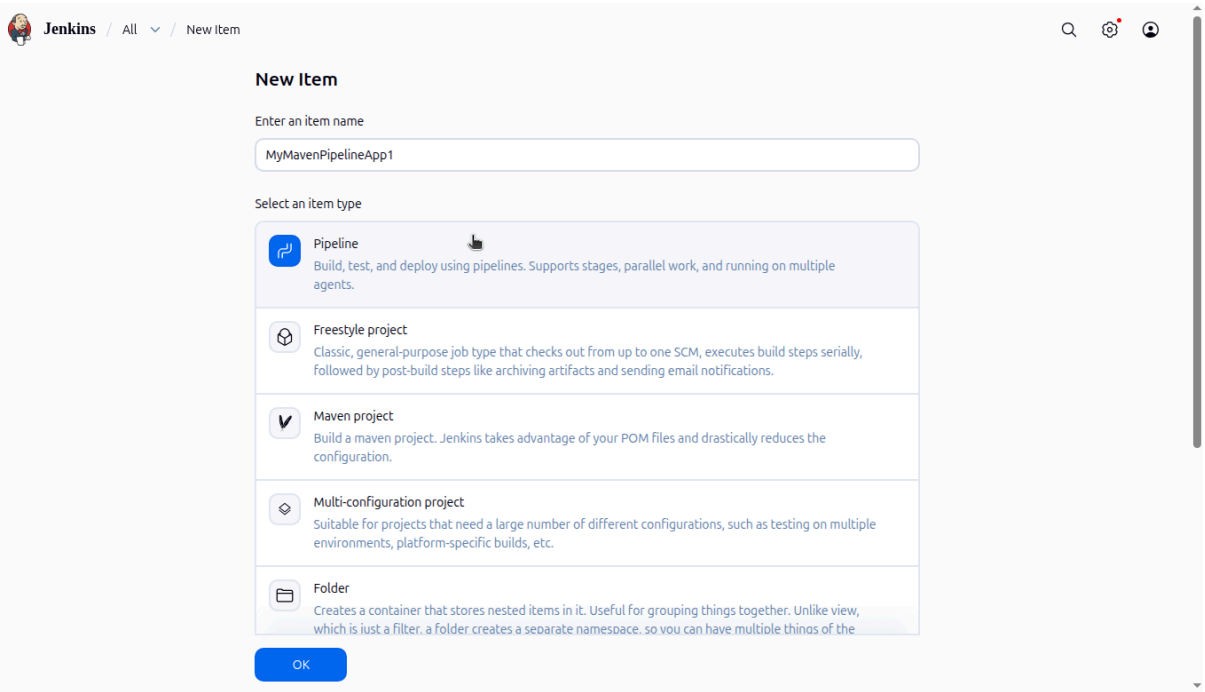
Jenkins Pipeline for MyMavenApp

Step 1: Open the Jenkins Dashboard in order to create a new item

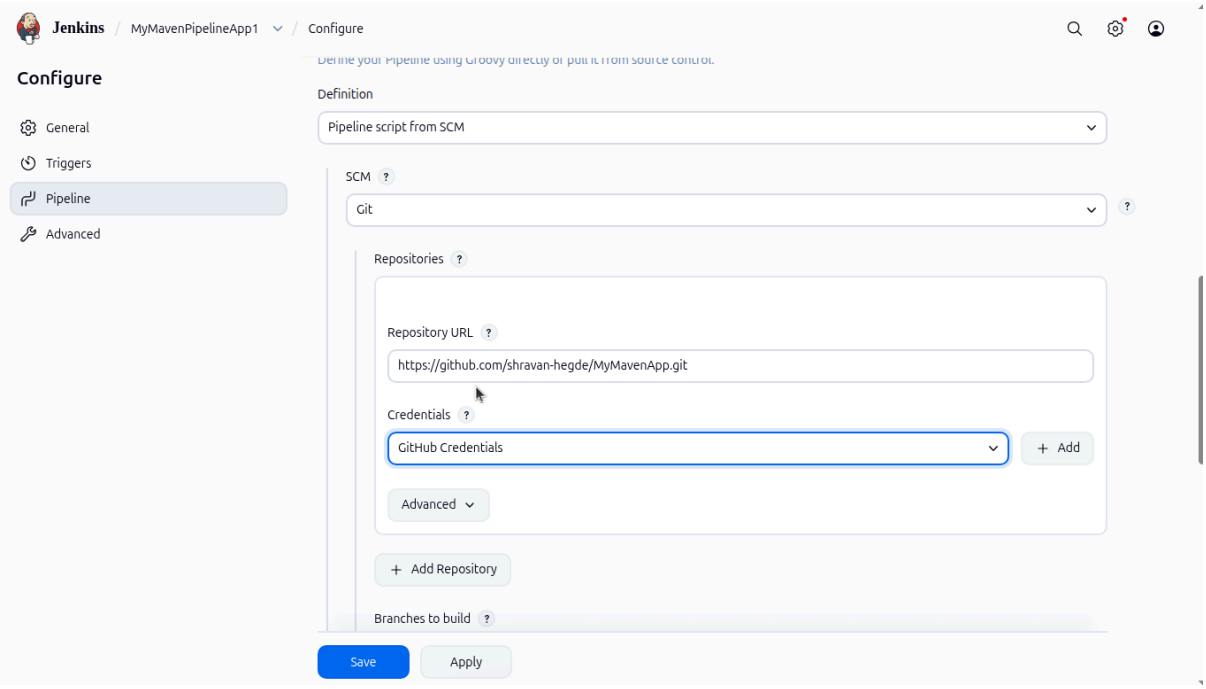


Step 2: Click on New Item in order for creating an New Item and thus give the name as "MyMavenApp" and Item type as Pipeline and

Create it



Step 3: Configure the settings by Defining the script as “Pipeline Script from SCM” and SCM as “Git”. Thus, now as we have selected Git, we need to paste the Repository URL of the project given in GitHub and choose Credentials as “GitHub Credentials” which was created earlier.



Step 4: Paste the available code inside the Jenkinsfile

```
pipeline {
    agent any

    tools {
        maven 'Maven'
    }

    stages {
        stage('Checkout') {
            steps {
                git branch: 'master', url: 'https://github.com/shravan-hegde/MyMavenApp.git'
            }
        }

        stage('Build') {
            steps {
                sh 'mvn clean package'
            }
        }

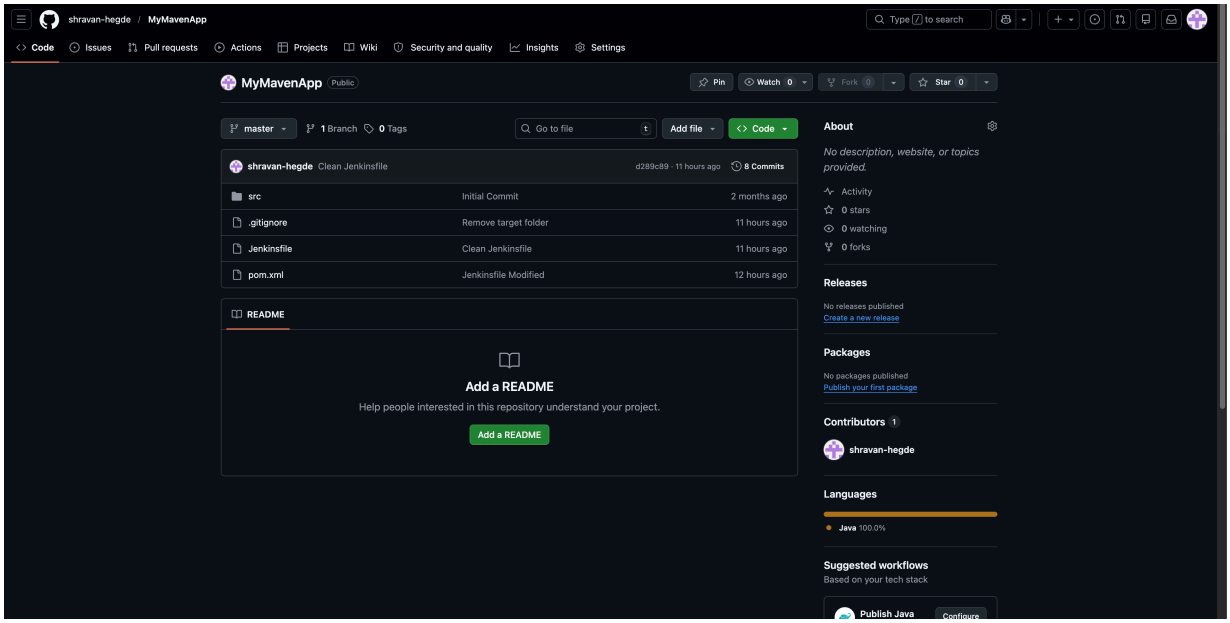
        stage('Test') {
            steps {
                sh 'mvn test'
            }
        }

        stage('Run') {
            steps {
                sh 'java -jar target/*.jar'
            }
```

Step 5: We need to update pom.xml also in order to change the versions of source and target from 1.7 to 1.8

```
<!-- Example: Maven Compiler Plugin to compile Java code -->
<plugin>
<groupId>org.apache.maven.plugins</groupId>
<artifactId>maven-compiler-plugin</artifactId>
<version>3.8.1</version>
<configuration>
<source>1.8</source>
<target>1.8</target>
</configuration>
</plugin>
```

Step 6: Now we need to Push changes and commit ny pushing the necessary "Jenkinsfile" to the respective Repo



Step 7: Now go to Jenkins and Build the Pipeline and thus check the Stage view for the successful execution.

Jenkins / MyMavenPipelineApp

- Status
- Changes
- Build Now
- Configure
- Delete Pipeline
- Full Stage View
- Rename
